

Cambi is a Norwegian company with over 30 years of experience in sludge treatment at wastewater treatment plants using the Thermal Hydrolysis technology. With more than 120 million users worldwide, we are positioned as global leaders with a proven technology, aligned with the principles of the circular economy. The implementation of Cambi's THP technology in treatment plants allows for: reducing the volume of required digesters by up to 70%, decreasing biosolids volumes by up to 50%, increasing biogas production by up to 50%.
