

QUASAR AUTOMATION is an engineering company with more than 20 years of experience transforming airports and other critical sectors into highly efficient operating environments. We design and integrate advanced technology solutions that enhance airport profitability by comprehensively optimizing passenger flow and elevating the traveler experience. Our solutions include next-generation self-service ecosystems, intelligent access control systems, and real-time data analytics powered by 3D digital twins, enabling the transformation of operational metrics into strategic decision-making. These capabilities are complemented by robust detection and protection solutions that strengthen overall security while ensuring compliance with the highest international standards.
